

### Training programmes

Training for judges, prosecutors, managers, and clerks of court in Italy and abroad have been periodically carried out by IRSIG's researchers and associates. The method developed over the years is based on the research findings that have been exploited to create original training materials such as case studies, role plays, simulations. Therefore, the training provided by IRSIG is always context specific and based on real justice system experiences. The Italian Ministry of Justice, in partnership with IRSIG, have received three acknowledgments of recognition for the innovative nature and high quality of training projects carried out for judicial personnel from the Italian Professional Trainers Association (AIF).

### A new training tool

IRSIG has also designed and created, in collaboration with other industrial and public partners, the [Court Technology Laboratory \(CTLab\)](#) in Bologna. The CTLab is a special hi-tech multimedia room which can be used for conferences, training, mock trials, videoconferencing of witnesses, and to test and evaluate information and communication technology developed for justice agencies. The CTLab is also a showroom suitable to present, discuss, and compare different technological systems and application. The AIF (Italian Association of Professional Trainers) has awarded the CTLab for its innovative training environment.
